

Content and Structure for website

First Page Main

Logo for Theme Park: The logo is the visual identity of the theme park and helps visitors recognize and remember the brand we would have it in the top left of the header as it would be the first people would see on the website.

Pictures of Theme Park as Background: Using images of the theme park as the background sets the mood and gives visitors a preview of the theme park and what it offers.

Welcome to Theme Park Introduction: This section provides a welcome and sets the tone for the website, making visitors feel invited and excited. And gives an introduction of what to expect.

Three Bars at the Top for Navigation: The bars/Header contain the main navigation menu, allowing users to easily access different sections of the website, such as "Home," "Booking," "Information," etc, with ease and allows them to understand what page they're on.

Information for Event or News: This section is likely to feature updates, news, and upcoming events or promotions happening at the theme park, keeping visitors informed and engaged and give them anticipation of going to the theme park.

At the Bottom header Some Type of Customer Service (Insta, etc.): Including contact information and links to the theme park's social media accounts like Instagram can help visitors reach out for support or connect through social media allowing us to grow our social media presence as well engaging with customers.

Second Page Booking

Booking: Booking: This page allows visitors to book their tickets or make reservations for their visit to the theme park. It can include ticket prices, different options, and an online booking form.

Hotel: If the theme park has its own hotel or is co-operation with nearby accommodations, the hotel section can provide information about accommodation options for visitors.

Third Page.

Information about Rides: This section provides detailed information about the rides and attractions within the theme park, including descriptions, thrill levels, and any safety considerations it can also tell customers if its available or under Maintenance.

Map: A map of the theme park can help visitors locate rides, restaurants, restrooms, and other key points of interest.

Opening Times: Displaying the park's opening and closing hours, as well as any seasonal holiday such as bank holiday and Christmas, it's important for visitors so they can plan their visit.

Accessibility: This section can provide information on the park's accessibility features, including facilities for people with disabilities, such as ramps, wheelchair rentals, and sensory-friendly options. As well as any changes we can make.

In summary, this website structure is designed to provide a user-friendly experience for visitors to a theme park. It offers information about the park, booking options, and essential details to make their visit enjoyable and convenient. The main page sets the tone for visitors and provides updates, while the second and third pages offer practical information to help visitors plan their visit, book their viist and have a great time at the theme park.
